DEPARTMENT OF REGULATORY AND ECONOMIC RESOURCES (RER) BOARD AND CODE ADMINISTRATION DIVISION

NOTICE OF ACCEPTANCE (NOA)

Firestone Building Products Company, LLC 200 4th Ave. South Nashville, TN 37201

SCOPE:

This NOA is being issued under the applicable rules and regulations governing the use of construction materials. The documentation submitted has been reviewed and accepted by Miami-Dade County RER -Product Control Section to be used in Miami Dade County and other areas where allowed by the Authority Having Jurisdiction (AHJ).

This NOA shall not be valid after the expiration date stated below. The Miami-Dade County Product Control Section (In Miami Dade County) and/or the AHJ (in areas other than Miami Dade County) reserve the right to have this product or material tested for quality assurance purposes. If this product or material fails to perform in the accepted manner, the manufacturer will incur the expense of such testing and the AHJ may immediately revoke, modify, or suspend the use of such product or material within their jurisdiction. RER reserves the right to revoke this acceptance, if it is determined by Miami-Dade County Product Control Section that this product or material fails to meet the requirements of the applicable building code.

This product is approved as described herein, and has been designed to comply with the Florida Building Code including the High Velocity Hurricane Zone of the Florida Building Code.

DESCRIPTION: Firestone UltraPly TPO & TPO XR Single Ply Roof Systems over Steel Decks.

LABELING: Each unit shall bear a permanent label with the manufacturer's name or logo, city, state and following statement: "Miami-Dade County Product Control Approved", unless otherwise noted herein.

RENEWAL of this NOA shall be considered after a renewal application has been filed and there has been no change in the applicable building code negatively affecting the performance of this product.

TERMINATION of this NOA will occur after the expiration date or if there has been a revision or change in the materials, use, and/or manufacture of the product or process. Misuse of this NOA as an endorsement of any product, for sales, advertising or any other purposes shall automatically terminate this NOA. Failure to comply with any section of this NOA shall be cause for termination and removal of NOA.

ADVERTISEMENT: The NOA number preceded by the words Miami-Dade County, Florida, and followed by the expiration date may be displayed in advertising literature. If any portion of the NOA is displayed, then it shall be done in its entirety.

INSPECTION: A copy of this entire NOA shall be provided to the user by the manufacturer or its distributors and shall be available for inspection at the job site at the request of the Building Official.

This NOA renews and revises NOA No. 13-1212.05 and consists of pages 1 through 104. The submitted documentation was reviewed by Jorge L. Acebo. And W

APPROVED ASSEMBLIES:

Membrane Type: Single Ply, TPO, Reinforced

One or more layers of any of the following insulations.

DensDeck Prime, SECUROCK Gypsum Fiber Roof Board

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 22 ga. Steel. Grade 33, structural supports maximum 5 ft. o.c.

System Type B(1): Membrane adhered over mechanically fastened insulation. Side laps are sealed

with a min 1.5" heat weld.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Base Insulation Layer Insulation Fasteners Fastener (Table 3) Density/ft² ISO 95+ GL, GenFlex ISO Insulation Minimum 1.5" thick 1 or 2 with 5 1:2 ft² **DensDeck Prime** Minimum ½" thick 1 or 2 with 5 1:2 ft² **Middle Insulation Layer Insulation Fasteners** Fastener (Table 3) Density/ft² ISO 95+ GL, GenFlex ISO Insulation Minimum 1" thick N/A N/A **Additional Middle Insulation Layer (Optional) Insulation Fasteners Fastener** (Table 3) Density/ft² ISO 95+ GL, GenFlex ISO Insulation Minimum 1" thick N/A N/A Tapered ISO 95+ GL, GenFlex ISO Insulation Tapered Minimum ½" thick with a ¼" per ft. taper N/A N/A

Note: Base layer shall be mechanically attached with fasteners and density described. All other layers of insulation shall be adhered to base insulations with I.S.O. Twin Pack Insulation Adhesive in continuous ½" to ¾" wide beads spaced 12" o.c. or I.S.O. Spray R, I.S.O. Fix II, or I.S.O. Stick applied in continuous ¾" to 1" wide ribbons spaced 12" o.c. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density. See Roofing Application Standard RAS 117 for fastening details.

Minimum 1" thick	N/A	N/A

Note: Base layer shall be mechanically attached with fasteners and density described. Top layer of insulation shall be adhered to base insulations with I.S.O. Twin Pack Insulation Adhesive in continuous ½" to ¾" wide beads spaced 4" o.c., I.S.O. Fix II, I.S.O. Spray R, or I.S.O. Stick applied in continuous ¾" to 1" wide ribbons spaced 4" o.c. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density. See Roofing Application Standard RAS 117 for fastening details.

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 11 of 104 Membrane:

UltraPly TPO roof cover is fully adhered with UltraPly Bonding Adhesive, Single-Ply LVOC Bonding Adhesive, or Single-Ply LVOC Bonding Adhesive 1168 applied at a rate of 60 ft²/gallon (120 ft²/gallon to both the underside of membrane and the substrate) or Water Based Bonding Adhesive P applied at a rate of 100-120 ft²/gallon. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

UltraPly TPO XR roof cover membrane adhered to the top insulation layer with I.S.O. Spray R applied in continuous ³/₄" to 1" wide ribbons spaced a maximum 12" o.c. or TPO XR is fully adhered to with hot asphalt or Owens Corning PermaMop applied in the EVT range at a rate of 25-30 lbs./sq. or XR Bonding Adhesive at a rate of 70-90 ft²/gal to the substrate only. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

Maximum Design Pressure:

-127.5 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 12 of 104

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 22 ga. Grade 80, Type B steel deck is secured to supports spaced max.

6 ft. o.c. with Traxx 5 fasteners spaced 6" o.c. (two fasteners installed at each bearing attachment point) and Traxx 1 fasteners 24" o.c. at the side laps.

This Tested Assembly has been analyzed for allowable deck stress. See

evidence submitted table.

System Type B(4): Membrane fully adhered over mechanically fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations:

Base Insulation Layer	Insulation Fasteners (Table 3)	Fastener Density/ft ²
RESISTA, Coated Glass Facer	,	•
Minimum 1.5" thick	1 or 2 with 5	1:1 ft ²
Top Insulation Layer	Insulation Fasteners	Fastener
•	(Table 3)	Density/ft ²
RESISTA, Coated Glass Facer	` ,	·
Minimum 1.5" thick	N/A	N/A

Note: Base layer shall be mechanically attached with fasteners and density described. Top layer of insulation shall be adhered to base insulations with I.S.O. Twin Pack Insulation Adhesive in continuous ½" to ¾" wide beads spaced 12" o.c. or I.S.O. Stick or I.S.O. Spray R applied in continuous ¾" to 1" wide ribbons spaced 12" o.c. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density. See Roofing Application Standard RAS 117 for fastening details.

Membrane: UltraPly TPO roof cover is fully adhered with UltraPly Bonding

Adhesive, Single-Ply LVOC Bonding Adhesive, or Single-Ply LVOC Bonding Adhesive 1168 applied at a rate of 60 ft²/gallon (120 ft²/gallon to both the underside of membrane and the substrate) or Water Based Bonding Adhesive P applied at a rate of 100-120 ft²/gallon. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

or

UltraPly TPO XR roof cover is adhered with XR Stick Membrane Adhesive or I.S.O. Spray R applied in 3/4" to 1" wide ribbons spaced a maximum 12" o.c. The roof cover side and end laps are sealed with a

minimum 1.5" heat weld.

System Type C(2): Membrane bonded over mechanically fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Base Insulation Layer Insulation Fasteners Fastener Density/ft²
(Table 3)

ISO 95+ GL, RESISTA, GenFlex ISO Insulation, Coated Glass Facer

Minimum 1.5" thick N/A N/A

Top Insulation Layer Insulation Fasteners Fastener Density/ft²

(Table 3)

ISO 95+ GL, GenFlex ISO Insulation, RESISTA, Coated Glass Facer

Minimum 1" thick 1 with 11 or 12 See Design Pressure

ISOGARD HD, GenFlex HD ISO

Minimum ½" thick 1 with 11 or 12 See Design Pressure

DensDeck, DensDeck Prime, SECUROCK Gypsum-Fiber Roof Board

Minimum ¼" thick 1 with 11 or 12 See Design Pressure

Plywood

Minimum 19/32" thick 1 with 11 or 12 See Design Pressure

ISOGARD HD Composite, GenFlex HD ISO Composite

Minimum 1.5" thick 1 with 11 or 12 See Design Pressure

Note: All layers shall be simultaneously fastened; see top layer below for fasteners and density. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density. See Roofing Application Standard RAS 117 for fastening details.

<u>InvisiWeld Plate Note: When using InvisiWeld Plates over steel decks, ensure that the combined thickness of the insulation is minimum 1". This thickness shall be measured from the top rib of the steel deck.</u>

Membrane: UltraPly TPO is bonded to the UltraPly TPO InvisiWeld Plates or InvisiWeld-S Plates

using a Portable Bonding Tool and weighted Cooling Clamps. The roof cover side and

end laps are sealed with a minimum 1.5" wide heat weld.

Minimum 1/4" thick	1 with 11 or 12	1:2 ft ²	
Plywood			
Minimum 19/32" thick	1 with 11 or 12	1:2 ft ²	

Note: All layers shall be simultaneously fastened; see top layer below for fasteners and density. Insulation panels listed are minimum sizes and dimensions; if larger panels are used, the number of fasteners shall be increased maintaining the same fastener density. Please refer to Roofing Application Standard RAS 117 for insulation attachment.

<u>InvisiWeld Plate Note: When using InvisiWeld Plates over steel decks, ensure that the combined thickness of the insulation is minimum 1". This thickness shall be measured from the top rib of the steel deck.</u>

Membrane: UltraPly TPO is bonded to the UltraPly TPO InvisiWeld Plates or InvisiWeld-S

Plates using a Portable Bonding Tool and weighted Cooling Clamps. The roof cover

side laps are sealed with a minimum 1.5" wide heat weld.

Maximum Design

Pressure: -105 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 35 of 104

Deck Type 2I: Steel, Insulated

Deck Description:

- 1. Minimum 18-22 ga., Type B, Grade 80 steel deck is secured to supports spaced 6 ft. o.c.
- 2. Minimum 18 ga. Type B, Grade 33 steel deck is secured to supports spaced 6 ft. o.c.
- 3. Minimum 20 ga. Type B, Grade 33 steel deck is secured to supports spaced 67" o.c.
- 4. Minimum 22 ga. Type B, Grade 33 steel deck is secured to supports spaced 5 ft. o.c.

Deck secured with Traxx 5 fasteners spaced 6" o.c. (one fastener installed at each bearing attachment point) and Traxx 1 fasteners 24" o.c. at the side laps. This Tested Assembly has been analyzed for allowable deck stress. See evidence submitted table.

System Type C(13): Membrane fully adhered over mechanically fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Base Insulation Layer (Optional)	Insulation Fasteners	Fastener
• • •	(Table 3)	Density/ft ²
ISO 95+ GL, RESISTA, GenFlex ISO Insulation, Coated	Glass Facer	
Minimum ½" thick	N/A	N/A
Top Insulation Layer	Insulation Fasteners	Fastener
	(Table 3)	Density/ft ²
ISOGARD HD Composite, GenFlex HD Composite ISO		
Minimum 2" thick	1 or 2 with 5	1: 1.33 ft ²

Note: All layers shall be simultaneously fastened; see top layer below for fasteners and density. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density. See Roofing Application Standard RAS 117 for fastening details.

Membrane: UltraPly TPO roof cover is fully adhered with UltraPly Bonding Adhesive, Single-

Ply LVOC Bonding Adhesive, or Single-Ply LVOC Bonding Adhesive 1168 applied at a rate of 60 ft²/gallon (120 ft²/gallon to both the underside of membrane and the substrate) or Water Based Bonding Adhesive P applied at a rate of 100-120 ft2/gallon. The roof cover side and end laps are sealed with a minimum 1.5" heat

weld. Or

Minimum UltraPly TPO XR 100, UltraPly TPO XR 115, or UltraPly TPO XR 135 membrane adhered with XR Stick Membrane Adhesive or ISO Spray R applied in ³/₄" to 1" wide ribbons spaced 12" o.c. The side and end laps are sealed with a minimum 1.5" heat weld.

Maximum Design

Pressure: -120 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 36 of 104

Deck Type 2I: Steel, Insulated

Deck Description: 1. Minimum 18-22 ga., Type B, Grade 80 steel deck is secured to supports spaced 6 ft. o.c.

2. Minimum 18 ga., Type B, Grade 33 steel deck is secured to supports spaced 6 ft. o.c.

Deck secured with (two fasteners installed at each bearing attachment point) Traxx 5 fasteners spaced 6" o.c. and Traxx 1 fasteners 12" o.c. at the side laps or with Hilti X-ENP-19 L15 or Hilti X-HSN 24 fasteners spaced 6" o.c. and Hilti S-SLC 01 M HWH fasteners 12" o.c. at the side laps.

This Tested Assembly has been analyzed for allowable deck stress. See evidence submitted table.

System Type C(14): Membrane adhered over mechanically fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 22 ga., Grade 33, Type B steel decking attached to steel supports

spaced 6 ft. o.c. with 5/8" diameter puddle welds 6" o.c. (at the bottom flute), and with side laps attached using $\frac{1}{4}$ " -14 x $\frac{7}{8}$ " HWH SD fasteners spaced 24"

o.c.

This Tested Assembly has been analyzed for allowable deck stress. See

evidence submitted table.

System Type C(22): Membrane bonded over mechanically fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Base Insulation Layer (Optional)	Insulation Fasteners (Table 3)	Fastener Density/ft ²
ISO 95+ GL, RESISTA, GenFlex ISO Insula	,	v
Minimum ½" thick	N/A	N/A
Top Insulation Layer	Insulation Fasteners (Table 3)	Fastener Density/ft ²
ISO 95+ GL, GenFlex ISO Insulation	,	•
Minimum ½ thick	1 with 11 or 12	1:4 ft ²

Note: All layers shall be simultaneously fastened; see top layer below for fasteners and density. Insulation panels listed are minimum sizes and dimensions; if larger panels are used, the number of fasteners shall be increased maintaining the same fastener density. Please refer to Roofing Application Standard RAS 117 for insulation attachment.

<u>InvisiWeld Plate Note: When using InvisiWeld Plates over steel decks, ensure that the combined thickness of the insulation is minimum 1". This thickness shall be measured from the top rib of the steel deck.</u>

Membrane: UltraPly TPO is induction welded to the UltraPly TPO InvisiWeld Plates or

InvisiWeld-S Plates and fastened with Firestone Heavy-Duty. The roof cover side

laps are sealed with a minimum 1.5" wide heat weld.

Maximum Design

Pressure: -45 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 47 of 104

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 22 ga., Grade 33, Type B steel is secured to supports spaced 6 ft. o.c.

with 5/8" diameter puddle welds spaced 6" o.c. at each flute and side laps

stitched 12" o.c. with $\frac{1}{4}$ " – 14 x 7/8" HWH screws.

This Tested Assembly has been analyzed for allowable deck stress. See

Evidence Submitted Table.

System Type C(23): All layers of insulation simultaneously attached; membrane fully adhered.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations:

Base Insulation Layer	Insulation Fasteners	Fastener
·	(Table 3)	Density/ft ²
ISO 95+ GL, RESISTA, GenFlex ISO Insulation,	, Coated Glass Facer	•
Minimum 1" thick	N/A	N/A

Or

UltraPly TPO XR (over SECUROCK and DensDeck only) roof cover is fully adhered to with hot asphalt or Owens Corning PermaMop applied in the EVT range at a rate of 25-30 lbs./sq. or XR Bonding Adhesive at a rate of 70-90 ft²/gal to the substrate only. The roof cover side and end laps are sealed with a minimum

1.5" heat weld.

Or

UltraPly TPO XR is adhered with XR Stick Membrane Adhesive or I.S.O. Spray R applied in ³/₄" to 1" wide ribbons spaced a maximum 12" o.c. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

Maximum Design

Pressure: -52.5 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 51 of 104

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 18 to 22 ga. Grade 33 steel deck secured to supports space at

maximum 6 ft. o.c. with ITW Buildex Traxx/5 spaced at 6" o.c. (one fastener installed at each bearing attachment point). Side lap fastened with ITW

Buildex Traxx/1 spaced at 30" o.c.

This Tested Assembly has been analyzed for allowable deck stress. See

Evidence Submitted Table.

System Type C(27): All layers of insulation simultaneously attached; membrane fully adhered.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Base Insulation Layer	Insulation Fasteners	Fastener
	(Table 3)	Density/ft ²
ISO 95+ GL, GenFlex ISO Insulation		
Minimum 1.5" thick	N/A	N/A
Top Insulation Layer (Optional)	Insulation Fasteners	Fastener
	(Table 3)	Density/ft ²
ISO 95+ GL, GenFlex ISO Insulation		
Minimum 1.5" thick	1 with 11 or 12	1:2 ft ²
ISO 95+ GL tapered, GenFlex ISO Insulation tapered		
Minimum 1/2" thick with minimum 1/4" taper	1 with 11 or 12	1:2 ft ²
ISOGARD HD, GenFlex HD ISO		
Minimum ½" thick	1 with 11 or 12	1:2 ft ²
DensDeck Prime, SECUROCK Gypsum-Fiber Roof B	oard	
Minimum ¼" thick	1 with 11 or 12	1:2 ft ²

Note: All insulation plates are secured to the deck with Insulation Fastener listed above (1). Insulation plates are placed in four rows. The first row of plates is placed 6" from the 8 ft. long edges of the board with subsequent rows of plates placed 12" o.c. The first plate of each row is placed 12in. from the 4 ft. long edges of the board with subsequent plates placed 24" o.c. The rows of plates securing the insulations boards shall consist of alternating rows of Insulation Plates listed above (6 and 12).

InvisiWeld Plate Note: When using InvisiWeld Plates over steel decks, ensure that the combined thickness of the insulation is minimum 1". This thickness shall be measured from the top rib of the steel deck.

Membrane: UltraPly TPO is bonded to the UltraPly TPO InvisiWeld Plates or InvisiWeld-S

Plates using a Portable Bonding Tool and weighted Cooling Clamps. The roof cover side and end laps are sealed with a minimum 1.5" wide heat weld.

Maximum Design

Pressure: -67.5 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 52 of 104

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 22 ga. Grade 33 steel deck secured to supports space at maximum 6 ft.

o.c. with #12-24 x 1-1/4" HWH SD screws and with panel laps attached using

 $\frac{1}{4}$ " -14 x 7/8" HWH SD fasteners spaced 24" o.c.

This Tested Assembly has been analyzed for allowable deck stress. See

Evidence Submitted Table.

System Type C(28): All layers of insulation simultaneously attached; membrane bonded.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Fire Barrier (Optional) 1/4" minimum thick SECUROCK Gypsum-Fiber Roof Board loose laid

Note: All layers shall be simultaneously fastened; see top layer below for fasteners and density. Insulation panels listed are minimum sizes and dimensions; if larger panels are used the number of fasteners per board shall be increased maintaining the same fastener density. See Roofing Application Standard RAS 117 for fastening details.

Membrane: UltraPly TPO roof cover is fully adhered with UltraPly Bonding Adhesive,

Single-Ply LVOC Bonding Adhesive, or Single-Ply LVOC Bonding Adhesive 1168 applied at a rate of 60 ft²/gallon (120 ft²/gallon to both the underside of membrane and the substrate) or Water Based Bonding Adhesive P applied at a rate of 100-120 ft²/gallon. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

UltraPly TPO XR (over SECUROCK only) roof cover is fully adhered to with hot asphalt or Owens Corning PermaMop applied in the EVT range at a rate of 25-30 lbs./sq. or XR Bonding Adhesive at a rate of 70-90 ft²/gal to the substrate only. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

UltraPly TPO XR is adhered with XR Stick Membrane Adhesive or I.S.O. Spray R applied in ³/₄" to 1" wide ribbons spaced a maximum 12" o.c. The roof cover side and end laps are sealed with a minimum 1.5" heat weld.

Maximum Design

Pressure: -45 psf. with Vapor Barrier (See General Limitation #9)

-62.5 psf. without Vapor Barrier (See General Limitation #9)

NOA No.: 17-0727.01 **Expiration Date: 11/27/22** Approval Date: 11/22/17 Page 57 of 104

Deck Type 2I: Steel, Insulated

Deck Description: Minimum 22 ga., Grade 33, Type B steel decking attached to steel supports

spaced 6 ft. o.c. with #12-24 x 1-1/4" HWH SD Screws spaced 6" o.c. (at the bottom flute), and with side laps attached using $\frac{1}{4}$ " -14 x 7/8" HWH SD

fasteners spaced 24" o.c.

This Tested Assembly has been analyzed for allowable deck stress. See

Evidence Submitted Table.

System Type C(33): All layers of insulation simultaneously attached; membrane fully adhered.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Base Insulation Layer (Optional)	Insulation Fasteners	Fastener
	(Table 3)	Density/ft ²

Minimum 2" thick	N/A	N/A

Note: All layers of insulation and membrane shall be simultaneously attached. See membrane below for fasteners and density. Refer to Roofing Application Standard RAS 117 for insulation attachment requirements. Insulation shall have preliminary attachment, prior to the installation of the roofing membrane.

Membrane: UltraPly TPO mechanically fastened to the deck through the insulation as

described below:

Fastening #1: Membrane mechanically fastened to the deck through the insulation using

Firestone Heavy-Duty and Firestone HD Seam Plates spaced 12" o.c. along the seam within minimum 6" wide roof laps. Fastener rows are spaced at maximum 90" o.c. and sealed with a minimum 1.5" wide heat weld on the outside edge of the

lap.

Maximum Design Pressure: -45 psf. (See General Limitation #7)

Fastening #2: Membrane mechanically fastened to the deck through the insulation using

Firestone Heavy-Duty Plus and Firestone HD Plus Seam Plates spaced 12" o.c. along the seam within minimum 6" wide roof laps. Fastener rows are spaced at maximum 114" o.c. and sealed with a minimum 1.5" wide heat weld on the

outside edge of the lap.

Maximum Design Pressure: -45 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 68 of 104

(Continued From Previous Page)

Fastening #3: Membrane is mechanically attached using Firestone Heavy Duty Plus and ³/₄" or 1"

Firestone Polymer Batten Strips with fasteners spaced 6" o.c. along the batten bar in rows spaced 142" o.c. and along one intermediate field row centered in the field

of the sheet. Side laps are sealed with a minimum 5" heat weld and the

intermediate field row is covered with a minimum 5" wide strip of UltraPly TPO

and sealed with a minimum 1.5" heat weld on either side of the batten. *Maximum Design Pressure: -135 psf. (See General Limitation #7)*

Fastening #4: Membrane is mechanically attached using Firestone Heavy-Duty and ³/₄" or 1"

Firestone Polymer Batten Strips with fasteners spaced 6" o.c. along the batten bar within minimum 6" wide laps. Laps are spaced at maximum 68" o.c. and sealed with a minimum 5" wide heat weld that encapsulates the fasteners and batten strip.

Maximum Design Pressure: -82.5 psf. (See General Limitation #7)

Maximum Design

Pressure: See Fastenings above.

- 3. Minimum 20 ga. Grade 80 steel deck is secured to supports spaced maximum 6 ft. o.c.
- 4. Minimum 22 ga. Grade 80 steel deck is secured to supports spaced maximum 66" o.c.

Deck is secured to structure with Traxx 5 fasteners spaced 6" o.c. and Traxx 1 fasteners 24" o.c. at the side laps.

This Tested Assembly has been analyzed for allowable deck stress. See Evidence Submitted Table.

System Type D(2): Membrane mechanically attached over preliminary fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Insulation Layer Insulation Fasteners (Table 3) Fastener

SO 95+ CL PESISTA ConFlox ISO Insulation Coated Class Facer

ISO 95+ GL, RESISTA, GenFlex ISO Insulation, Coated Glass Facer

Minimum 1.5" thick N/A N/A

Note: All layers of insulation and membrane shall be simultaneously attached. See membrane below for fasteners and density. Refer to Roofing Application Standard RAS 117 for insulation attachment requirements. Insulation shall have preliminary attachment, prior to the installation of the roofing membrane.

Membrane:

Mechanically attach UltraPly QuickSeam R.M.A. Strips with Firestone Heavy-Duty 6" o.c. in Coiled Metal Batten Strip centered within the 4" wide center section of the UltraPly QuickSeam R.M.A Strips in rows 10 ft. o.c. UltraPly TPO roof cover is adhered to the UltraPly QuickSeam R.M.A. Strips by first priming the underside of the roof cover, at the strip locations, with Single-Ply QuickPrime Primer and placing the primed portion of the roof cover onto the strips. Minimum 2" wide side laps are sealed with a minimum 1.5" wide heat weld.

Or

Mechanically attach UltraPly TPO membrane with Firestone Heavy Duty Plus 12" o.c. in 3/4" or 1" Firestone Polymer Batten Strips centered within the 6" wide side laps in rows 9.5 ft. o.c. The roof cover laps are sealed with a minimum 5" heat weld.

Maximum Design

Pressure: -45 psf. (See General Limitation #7)

NOA No.: 17-0727.01 Expiration Date: 11/27/22 Approval Date: 11/22/17 Page 70 of 104

Deck Type 2I: Steel, Insulated

Deck Description: 1. Minimum 18 ga., Grade 33, Type B steel decking attached to steel supports spaced maximum 4 ft. o.c.

- 2. Minimum 18 ga., Grade 80, Type B steel decking attached to steel supports spaced maximum 6 ft. o.c.
- 3. Minimum 20 ga., Grade 80, Type B steel decking attached to steel supports spaced maximum 5 ft. o.c.
- 4. Minimum 22 ga., Grade 80, Type B steel decking attached to steel supports spaced maximum 4 ft. o.c.

Deck is secured to structure with Traxx 5 fasteners spaced 6" o.c. (at the bottom flute), and with side laps attached using Traxx 1 fasteners spaced 24" o.c. **This Tested Assembly has been analyzed for allowable deck stress. See Evidence Submitted Table.**

System Type D(3): All layers of insulation and base sheet simultaneously attached.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

One or more layers of any of the following insulations.

Insulation Layer Insulation Fasteners Fastener (Table 3) Fastener

ISO 95+ GL, RESISTA, GenFlex ISO Insulation, Coated Glass Facer

Minimum 1.5" thick N/A N/A

Note: All layers of insulation and membrane shall be simultaneously attached. See membrane below for fasteners and density. Refer to Roofing Application Standard RAS 117 for insulation attachment requirements. Insulation shall have preliminary attachment, prior to the installation of the roofing membrane.

Membrane: UltraPly TPO mechanically fastened to the deck through the insulation as

described below:

Fastening #1: Membrane is mechanically attached using Firestone Heavy Duty Plus and

Firestone HD Plus Seam Plates spaced 6" o.c. within minimum 6" wide laps. Laps are spaced at maximum 114" o.c. and sealed with a minimum 1.5" heat weld.

Or

Membrane is mechanically attached using Firestone Heavy Duty Plus and 1" wide Coiled Metal Batten Strip with fasteners spaced 6" o.c. along the batten bar within minimum 6" wide laps. Laps are spaced at maximum 114" o.c. and sealed with a minimum 5" wide heat weld that encapsulates the fasteners and batten strip.

Maximum Design Pressure: -67.5 psf. (See General Limitation #7)

Fastening #2: Membrane is mechanically attached using Firestone Heavy Duty and Firestone HD

Seam Plates spaced 6" o.c. within minimum 6" wide laps. Laps are spaced at

maximum 142" o.c. and sealed with a minimum 1.5" heat weld.

Or

Membrane is mechanically attached using Firestone Heavy Duty and 1" wide Coiled Metal Batten Strip with fasteners spaced 6" o.c. along the batten bar within minimum 6" wide laps. Laps are spaced at maximum 142" o.c. and sealed with a minimum 5" wide heat weld that encapsulates the fasteners and batten strip.

Maximum Design Pressure: -52.5 psf. (See General Limitation #7)

Maximum Design

Pressure: See Fastening Options above

NOA No.: 17-0727.01 **Expiration Date: 11/27/22** Approval Date: 11/22/17 Page 103 of 104

STEEL DECK SYSTEM LIMITATIONS:

- If mechanical attachment to the structural deck through the lightweight insulating concrete is proposed, a field withdrawal resistance testing shall be performed to determine equivalent or enhanced fastener patterns and density. All testing and fastening design shall be in compliance with Testing Application Standard TAS 105 and Roofing Application Standard RAS 117 and/or RAS 137, calculations shall be signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant.
- 2. For steel deck application where specific deck construction is not referenced: The deck shall be a minimum 22 gage attached with 5/8" puddle welds with weld washers at every flute with maximum deck spans of 5 ft. o.c.

GENERAL LIMITATIONS:

- 1. Fire classification is not part of this acceptance; refer to a current Approved Roofing Materials Directory for fire ratings of this product.
- 2. Insulation may be installed in multiple layers. The first layer shall be attached in compliance with Product Control Approval guidelines. All other layers shall be adhered in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq., or mechanically attached using the fastening pattern of the top layer.
- 3. All standard panel sizes are acceptable for mechanical attachment. When applied in approved asphalt, panel size shall be 4' x 4' maximum.
- 4. An overlay and/or recovery board insulation panel is required on all applications over closed cell foam insulations when the base sheet is fully mopped. If no recovery board is used the base sheet shall be applied using spot mopping with approved asphalt, 12" diameter circles, 24" o.c.; or strip mopped 8" ribbons in three rows, one at each side lap and one down the center of the sheet allowing a continuous area of ventilation. Encircling of the strips is not acceptable. A 6" break shall be placed every 12' in each ribbon to allow cross ventilation. Asphalt application of either system shall be at a minimum rate of 12 lbs./sq.
 - Note: Spot attached systems shall be limited to a maximum design pressure of -45 psf.
- 5. Fastener spacing for insulation attachment is based on a Minimum Characteristic Force (F') value of 275 lbf. as tested in compliance with Testing Application Standard TAS 105. If the fastener value, as field-tested, are below 275 lbf. Insulation attachment shall not be acceptable.
- 6. Fastener spacing for mechanical attachment of anchor/base sheet or membrane attachment is based on a minimum fastener resistance value in conjunction with the maximum design value listed within a specific system. Should the fastener resistance be less than that required, as determined by the Building Official, a revised fastener spacing, prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant may be submitted. Said revised fastener spacing shall utilize the withdrawal resistance value taken from Testing Application Standards TAS 105 and calculations in compliance with Roofing Application Standard RAS 117.
- 7. Perimeter and corner areas shall comply with the enhanced uplift pressure requirements of these areas. Fastener densities shall be increased for both insulation and base sheet as calculated in compliance with Roofing Application Standard RAS 117 and/or RAS 137. Calculations prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant (When this limitation is specifically referred within this NOA, General Limitation #9 will not be applicable.)
- 8. All attachment and sizing of perimeter nailers, metal profile, and/or flashing termination designs shall conform to Roofing Application Standard RAS 111 and applicable wind load requirements.
- 9. The maximum designed pressure limitation listed shall be applicable to all roof pressure zones (i.e. field, perimeters, and corners). Neither rational analysis, nor extrapolation shall be permitted for enhanced fastening at enhanced pressure zones (i.e. perimeters, extended corners and corners). (When this limitation is specifically referred within this NOA, General Limitation #7 will not be applicable.)
- 10. All products listed herein shall have a quality assurance audit in accordance with the Florida Building Code and Rule 61G20-3 of the Florida Administrative Code.

END OF THIS ACCEPTANCE
